Why CHARME ?

- 80-90% of the research data are not accessible or re-usable (DFG, German Research Foundation evaluation)
- There is a crisis in data reproducibility*

*Nature's survey of 1,576 researchers who took a brief online questionnaire on reproducibility in research

- Although 52% agree that there is a significant 'crisis' of reproducibility, less than 31% think that failure to reproduce published results means that the result is probably wrong, and most say that they still trust the published literature.

- More than 70% of researchers have tried and failed to reproduce another scientist's experiments, and more than half have failed to reproduce their own experiments.

*<http://www.nature.com/news/1-500-scientists-lift-the-lid-on-reproducibility-1.19970>

Reasons

- Data are not shared via (public) repositories
- Appropriate metadata missing
- Information missing about experiments
- Data formats are not appropriate

Problems of current life-science research

- Standardisation Initiatives are currently working largely independently from each other
- The available tools and legislation on standards and Standard Operating Procedures (SOPs) are still not:
 - Sufficiently comprehensive
 - Efficient
 - Harmonised
 - Adopted by the communities

The COST Action CHARME is based on the work and outcomes of different initiatives (among others)

Expected Outcome

- Use of standards for the acquisition, analysis and publication of research data is essential to maximise research efforts and technology transfer.
- Adherence to standards provides greater confidence in data quality, and facilitates data interoperability, sharing and re-use.
- Reproducibility of data and experimental procedures are essential for good research practices, and can only be achieved if research data are produced and published in accordance with well-established quality standards.
- Standards and SOPs must be key elements of any research project, and should be adopted in both wet-lab procedures and in silico research.

CHARME - Harmonising standardisation strategies to increase efficiency and competitiveness of European life-science research

Aim & Primary Objectives

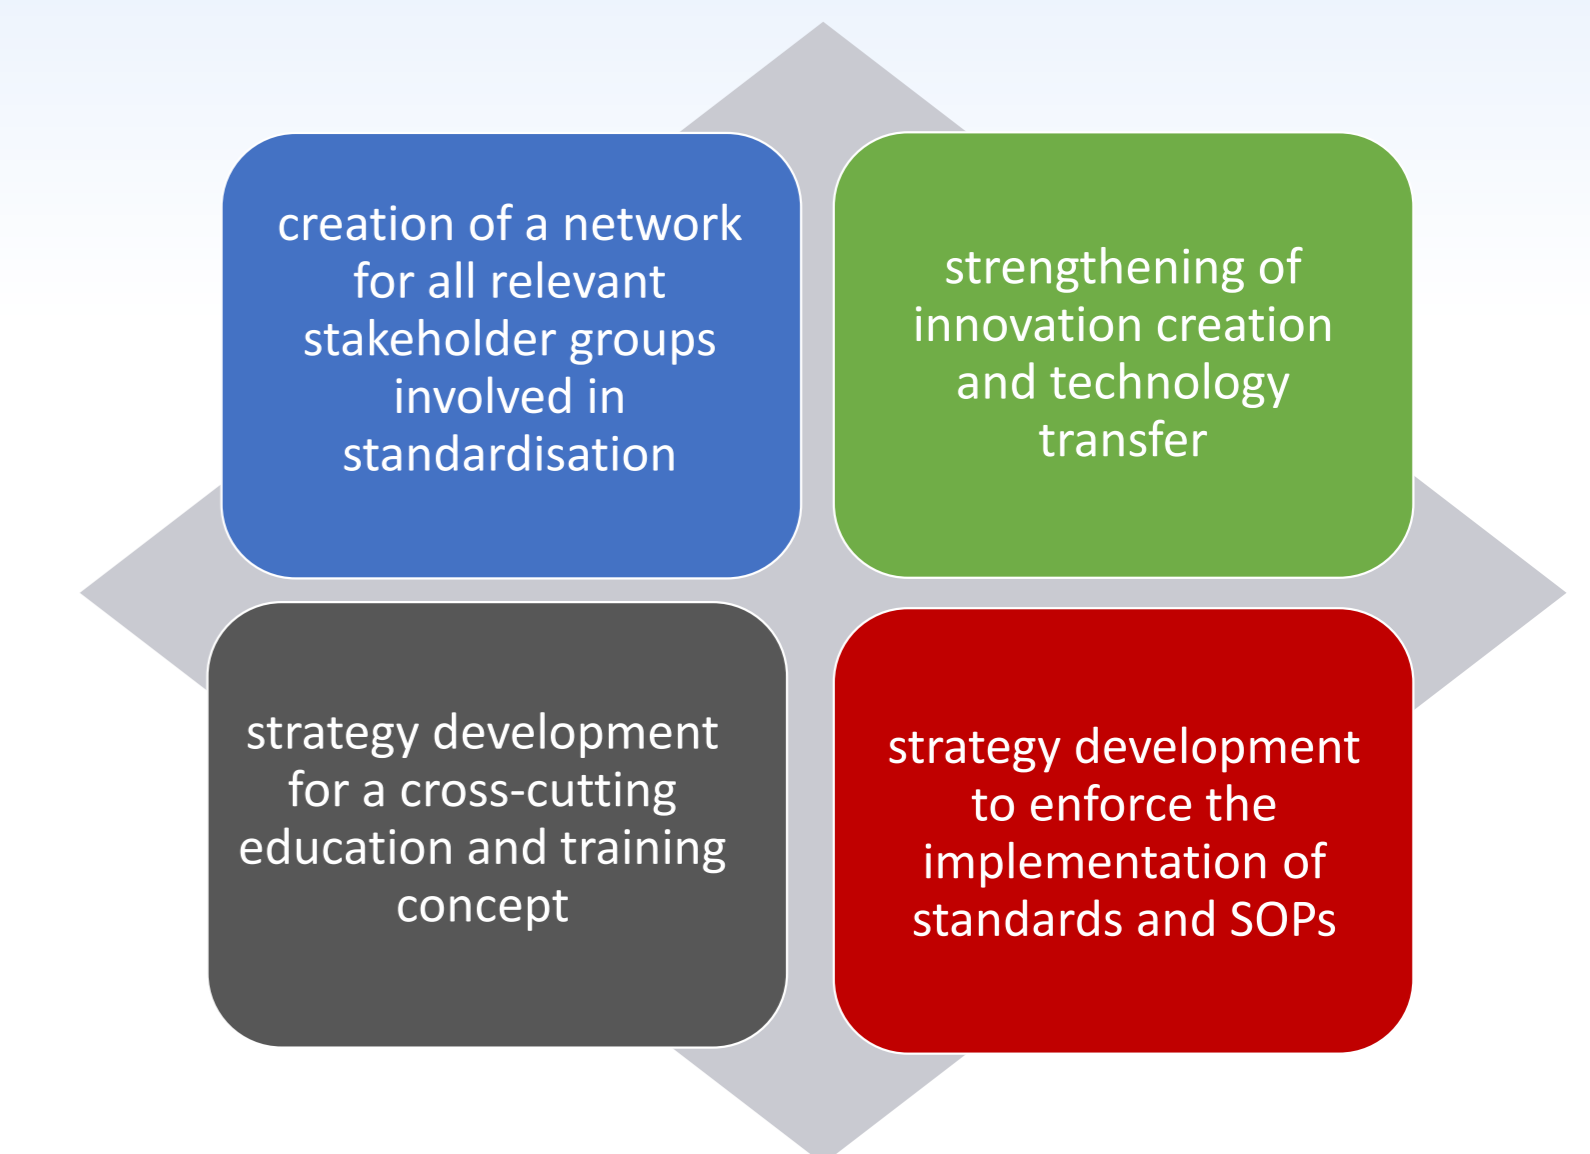

CHARME aims to bridge and combine fragmented initiatives in the development of new norms and standards, to achieve a breakthrough in standardisation efforts.

CHARME will identify needs and gaps, teaming up with other initiatives and organisations to avoid duplication and overlap of standardisation activities.

CHARME will develop a common, coordinated, long-term strategy, by active involvement of all stakeholders (from research, industry and policy), to successfully assimilate standards into researchers' daily work-flows.

CHARME Pillars

The Cost Action CA15110 is supported by the EU Framework Programme H2020

We need to create a link between Academy and Industry including Funders and European Standardisation Bodies
